In conjunction with partners Genentech and Oracle as well as the members of its active and diverse healthcare committee, the Bay Area Council will be convening a summit on exciting recent advances in precision medicine on February 25, 2016. In addition to showcasing the scientific progress in this field, the summit will include a serious high-level conversation about how to best deliver and pay for precision medicine so as to provide maximum benefit to patients within the context of a healthcare system that is financially sustainable for the country, businesses and individuals. The key themes that emerge from the conference will be included in a white paper issued by the Bay Area Science and Innovation Consortium, a group of high-level research executives from regional organizations that is the Council’s science and technology leadership committee.

**Agenda**

**10:00AM  The Promise of Precision Medicine**
Host organizations provide introduction to the topic and discuss the promise of precision medicine and its importance to their organizations and industries.

- **Safra Catz**, CEO, Oracle
- **Mike Varney**, Executive Vice President, Genentech
- **Jim Wunderman**, President and CEO, Bay Area Council

**10:30AM  Cutting Edge Scientific Advancements**
These TED talk style presentations will showcase recent and expected advances made possible through research at UCSF and other institutions through the support of California’s Precision Medicine program as well as other initiatives. These presentations will demonstrate the promise of precision medicine in two or three different fields including but not limited to oncology, focusing on the importance of big data and diagnostic tools as well as treatments.

- **Atul Butte**, Director, Institute for Computational Health Sciences at the University of California, San Francisco
- **Jonathan Sheldon**, PhD, Global Vice President, Healthcare Product Strategy, Oracle
- **Garret Hampton**, PhD, Vice President of Oncology Diagnostics, Genentech
12:00PM  Networking Lunch

12:30PM  Precision Medicine in the Public Sphere
A presentation focusing on policy approaches that support the development of and access to precision medical technology as well as ensuring that delivering this medicine is fiscally sustainable.

- Diana Dooley, Secretary, California Department of Health and Human Services

1:15PM  Delivering on the Promise of Precision Medicine
A conversation among CEOs charged with paying for and delivering precision medicine focused on the importance of providing these treatments to patients as well as the need to develop sustainable financing mechanisms for them.

- Micah Weinberg, President, Economic Institute
- Paul Markovich, CEO, Blue Shield of California
- Lloyd Dean, CEO, Dignity Health
- Dr. Michael Seiden, Chief Medical Officer, McKesson Specialty Health and The US Oncology Network

2:15PM  New Medicine, New Frontiers
The day will end with a big picture presentation on the impact of precision medicine technologies on patients, families and our society.

- Dr. Otis Brawley, Chief Medical Officer, American Cancer Society
